Education

University of South Florida **May 2028**
Bachelor of Science in Computer Science *3.75 GPA*

Experience

Bake More Pies **September 2026 – Present**
AI Intern *Hybrid – Tampa, FL*

- Developed automated AI workflows and data retrieval pipelines to extract document information and route prompts, decreasing manual processing time by 55%.
- Engineered backend REST APIs to handle dynamic logic across 20+ workflows, achieving perfect data accuracy in generated reports and reducing QA testing time by 25%.
- Optimized RAG retrieval pipelines and vector embeddings, improving AI response contextual accuracy and reducing query latency by 30%.
- Python, OpenAI APIs, LangChain, Codex, RAG, PHP, Laravel, SQL, REST APIs, JSON

University of South Florida Information Technology **December 2024 – Present**
AI Agent Student Developer *Remote – Tampa, FL*

- Architected AI support agents to automatically resolve over 2,500 monthly IT inquiries across multiple platforms, seamlessly integrating with internal data systems.
- Enhanced internal AI tools with custom server integrations, cutting data lookup time by 40% and decreasing ticket misrouting by 85% through optimized routing logic.
- Python, Copilot Studio, Claude Code, MCP, Azure AI Foundry, Power Automate, Dataverse, Graph API

UL Solutions **May 2026 – August 2026**
Software Engineering Intern *Onsite – Fremont, CA*

- Built a machine learning classification pipeline to analyze 10,000+ test outcomes, reducing manual review by 75%, and automated multi-protocol wireless compliance testing suites to validate 1,200+ devices, cutting setup overhead by half.
- Python, Pandas, NumPy, scikit-learn, pytest, pyserial, paramiko, Wi-Fi 6E, Bluetooth 5.0, 5G

Projects

Option Pricing Predictor | *Python, REST API, NumPy, Pandas, SciPy, Streamlit* **Live Demo - December 2025**

- Built an interactive Black-Scholes option pricing platform in Streamlit integrating the yfinance API with fallback caching to process live option chains, computing vectorized Greek sensitivities and 3D implied volatility surfaces in NumPy and SciPy with Matplotlib and Plotly risk heatmaps.

Autonomous AI Voice Agent | *Python, FastAPI, WebSockets, Twilio, Gemini API, JSON* **February 2026**

- Built a low-latency autonomous voice agent connecting Twilio telephony streams to the Gemini Multimodal Live API over bidirectional WebSockets in asynchronous Python, using a FastAPI backend with strict JSON schema validation to route real-time audio payloads and extract structured call records from spoken inputs.

Technical Skills

Languages: Python, C/C++, SQL, TypeScript, PHP, JSON, PowerShell, KQL

Developer Tools: Git/GitHub, Azure Portal, Codex, Claude Code, Copilot Studio, VS Code, Power BI, Linux/Unix

Frameworks & Technologies: PyTorch, scikit-learn, Pandas, NumPy, Pytest, FastAPI, REST APIs, Laravel, React, LangChain, Azure AI Foundry, RAG, MCP, Power Automate

Leadership / Extracurricular

Google Developer Student Clubs **November 2024 – June 2025**
Tech Lead *University of South Florida*

- Built and presented an Olympic medal linear regression predictor to forecast country performance and trained a deep learning Keras CNN on 27,000+ Kaggle images, achieving 95% classification precision.

Association for Computing Machinery **October 2024 – September 2025**
Operations Lead *University of South Florida*

- Led a 32-member executive board, coordinating weekly operations, workshop logistics, and strategic documentation.
